

Slide 1: Title Slide

ElectroShop – Online Electronics Shopping Website
Website Design and Development Internship Project
Presented By: Rashmitha Parla
Technologies Used: HTML5, CSS3, JavaScript, Bootstrap 5

Slide 2: Introduction

ElectroShop is a responsive e-commerce website for electronic products. It provides users with an easy and convenient online shopping experience. Customers can browse products, view details, and manage their shopping cart. Designed using modern web technologies.

Slide 3: Problem Statement

Traditional shopping has several limitations: Requires physical store visits, consumes significant time, difficult product comparison, and limited accessibility. Need: An online platform that allows users to browse and explore electronic products anytime and anywhere.

Slide 4: Project Objectives

Provide an online shopping experience. Display products efficiently. Organize products into categories. Improve user interaction. Ensure responsive design across devices. Create a modern and attractive interface.

Slide 5: Proposed Solution

Product Browsing, Product Categories, Product Details, Shopping Cart, Contact Form, Responsive Design.

Slide 6: Technologies Used

HTML5 – Website Structure

CSS3 – Styling

Bootstrap 5 – Responsive Design

JavaScript – Interactivity

Slide 7: System Architecture

User → Home Page → Categories → Products Page → Product Details → Shopping Cart → Contact Page
